

TLG-LØV

Circular diffuser

- Design-protected LØV perforation
- Excellent low temperature resistance
- Adjustable slot height
- Low-profile design
- Data provided with Luna plenum box installed
- Box lined with sound absorber in polyester

TLG-LØV

APPLICATION

TLG-LØV is a circular supply diffuser for ceiling mounting. TLG-LØV offers excellent induction, and is suitable for both constant and variable air flow rates.

DESIGN

TLG-LØV features a front panel with LØV perforation and adjustable slot height.

MATERIALS AND SURFACE COATING

The diffuser and ceiling plate are in a steel design, and the connection collar is equipped with an EPDM rubber gasket. All internal and external diffuser elements come in a RAL 9003 - gloss 30 finish. Other colours are available on request.

QUICK SELECTION

TLG-LØV	[m ³ /h]		
Dim.	25 dB(A)	30 dB(A)	35 dB(A)
100	87	104	123
125	144	167	194

Table 2

Fig.1

TLG-LØV with Luna plenum box

APPLICATION

The Luna plenum box is recommended for improved sound attenuation, and works as an adjustment and measurement unit. Luna is a rectangular box equipped with a removable damper which provides access to the connecting duct. The damper can be secured in any position required.

DESIGN

Luna plenum box features a damper and measuring outlet for commissioning. It is insulated with sound absorber in polyester and is available with one or two dimensional changes between inlet and outlet. Furthermore, the box can be delivered with external condensation insulation [I].

A lowprofile design [UI] is also available, and **for this design a reduction in capacity of approx. 20% will apply.** The distance between diffuser and box can be increased by up to 35 cm without extending the wire and measuring tube.

MATERIALS AND SURFACE COATING

Luna is supplied a galvanised finish, and with all four internal walls lined with sound absorber in polyester. The connection collar is fitted with an EPDM rubber gasket.

Table 4

Fig. 2

TLG-LØV

ACOUSTIC DATA

The diagrams provide a summary of the A-weighted sound power level from diffuser, L_{WA} . Correction factors in table 6, page 8, are used to calculate emitted sound power level at the respective frequencies, $L_W = L_{WA} + KO$. A room with absorption equivalent to 10m² Sabine will have a sound pressure level which is 4 dB below the sound power level emitted.

The diagrams assume maximum slot height.

Example:

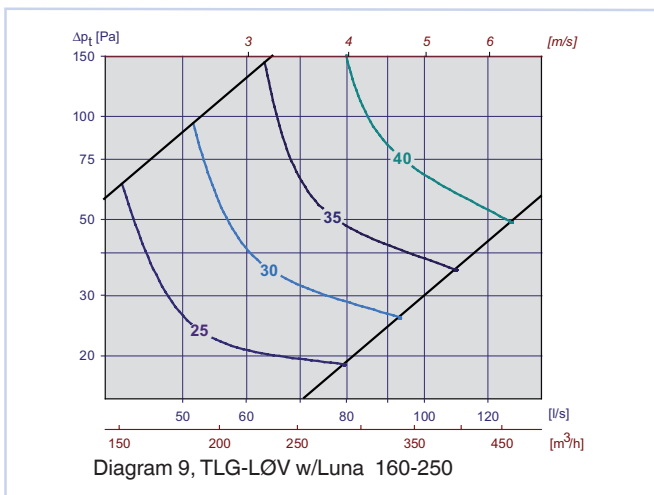

TLG-LØV with Luna 125-125. Desired air flow rate: 35 l/s. From diagram 4 we find that $L_{WA} = 31$ dB(A) with damper open and 20 Pa total pressure loss. We would like to find the following data:

- Emitted sound power level at 250 Hz
 - A-weighted sound pressure level in an office
 - A-weighted sound pressure level in an office at 50 Pa total pressure loss (i.e. 30 Pa choking with the unit's damper)
- The correction factor is 2 dB. Emitted sound power level at 250 Hz is thus: $L_W = L_{WA} + KO = 31 + (2) = 33$ dB
 - If we assume a room absorption equivalent to 10m² Sabine, A-weighted sound pressure level will be: $31 - 4 = 27$ dB(A)
 - Tracing the 35 l/s line in the diagram up to 50 Pa gives us a reading of 33 dB(A) = increase of 2 dB, and A-weighted sound pressure level will thus be 29 dB(A)

THROW LENGTHS

FLOW PATTERN

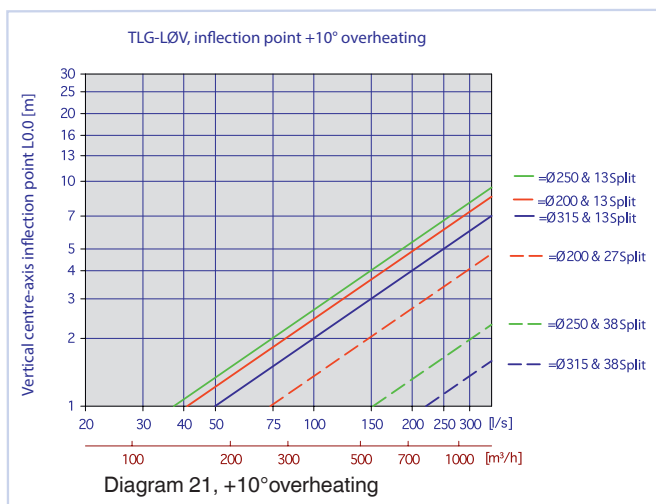

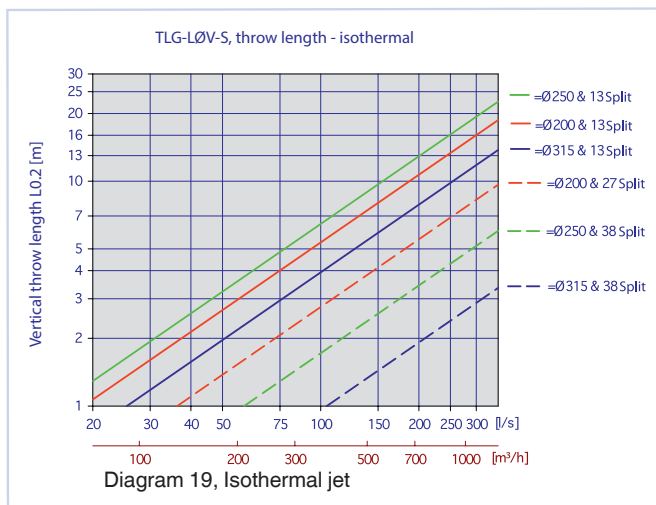

TLG-LØV

THROW LENGTHS

Velocities for the vertical jet produced by TLG-LØV-S have been measured. For isothermal conditions, the vertical throw length can be found by using diagram 19.

In the event of overheated air (heating), diagrams 20 and 21 are used to find the jet inflection point for respectively 5° or 10° overheating relative to the indoor air temperature.

TLG-LØV

INSTALLATION

When mounted in fixed ceiling or inserted in ceiling plate, TLG-LØV is attached by means of two mounting brackets as shown in fig. 5, or the diffuser is screwed on to the box outlet. If a Luna plenum box is used, the unit is attached to the rear of the support bracket by means of threaded rod or strap (fig. 5).

Fig. 4: Installation

Fig. 5: Installation

TLG-LØV is developed and manufactured by:

COMMISSIONING

During commissioning, the diffuser front must be fitted. Measuring tube and adjustment wire are pulled through the slot. The damper is secured by using a clamping nut on the wire. Correction factors for calculation of air flow rates are provided on the label inside the diffuser, or can be found in our commissioning guide at our website: www.trox.no.

MAINTENANCE

The diffuser can be cleaned by using a damp cloth. When cleaning the duct network, the diffuser front must be removed in order to gain access to the duct. In Luna is used, diffuser plate and damper are to be removed in order to gain free access to the duct.

ENVIRONMENT

Enquiries regarding product declaration can be directed to our sales team, or information can be found at www.trox.no

The company reserves the right to make amendments without prior notice.
